

WE Tech Solutions is a Finnish clean-tech company that develops, sells and delivers energy efficiency solutions for the global shipping industry. The core of our solutions is based on applied variable frequency drive technology, variable speed power generation and DC-link power distribution for marine installations. WE equip ships for success. For more info visit www.wetech.fi

As our business is expanding, we are searching for a versatile **Application Engineer** to join our team.

Main responsibilities:

- Control system application code development
- Technical support towards customers and other stakeholders
- Troubleshooting on automation and power electronics
- Service support for existing fleet
- Commissioning support for new build projects
- Create and maintain project documentation

Requirements:

- M.Sc. or B.Sc. in Electrical or Automation engineering
- Minimum 5 years of experience in similar tasks
- Strong knowledge in power electronics and PLC based control systems
- Excellence in team working and communication in multicultural environments
- Ability to take responsibility and make decisions independently
- Strong organisational skills with high attention to detail and sense of urgency in dealing with tasks
- Fluency in English language, written and spoken
- Willingness to travel globally
- Experience in power generation and/or marine solutions seen as a merit

WE Tech offer you a competitive salary and good employee benefits. WE offer you the agility of a young and international company with possibilities to use and develop your skills in a wide area of expertise. WE offer an inspiring workplace with a seaside location in the heart of the city of Vaasa.
